Karthik Uppari

Software Development Intern

Hyderabad, India | upparikarthik505@gmail.com | linkedin.com/in/karthik-uppari-4005a7373 | github.com/karthik1122-code

PROFESSIONAL SUMMARY

B.Tech Computer Science (AI/ML) student at NIAT with hands-on experience building full-stack web applications using React, Node.js, Express.js and MongoDB, including REST APIs, JWT authentication and AI features built on the Gemini API. Seeking an SDE / Full Stack internship to apply these skills to real-world projects.

TECHNICAL SKILLS

Languages:	JavaScript, Python, C++
Frontend:	React, HTML, CSS, Tailwind CSS
Backend:	Node.js, Express.js, REST APIs, JWT Authentication, Pagination, Rate Limiting, Automated Testing
Database:	MongoDB, Mongoose
Generative AI:	Prompt Engineering, LLM APIs (Gemini), Streaming Responses (SSE)
Tools:	Git, GitHub, Vercel, Render

PROJECTS

SpendLog - Expense tracker with user accounts

React | Node.js | Express.js | MongoDB | Mongoose | JWT

- Built a full-stack expense tracker with a React dashboard (monthly budget, six-month chart, category breakdown, search, undo, CSV export) and a landing page, backed by a REST API on Express.js and MongoDB (Mongoose).
- Implemented sign-up and login with bcrypt-hashed passwords and JWT in httpOnly cookies, plus login rate limiting and security headers.
- Added server-side filtering, pagination and a monthly summary endpoint, scoped to the logged-in user and covered by 13 automated tests; deployed on Render with MongoDB Atlas.

GitHub: github.com/karthik1122-code/spendlog | Live Demo: spendlog-e525.onrender.com

CogniSpace - Notion-style workspace with an AI Copilot

React | TypeScript | Express.js | MongoDB | Gemini API | Server-Sent Events

- Built a full-stack workspace with a block editor, kanban sprint board and version history (React 19, Vite, Tailwind) on an Express.js and MongoDB (Mongoose) API, deployed on Vercel and Render.
- Added an AI Copilot that streams Gemini responses into the editor over server-sent events, with rate limits; sign-in uses bcrypt and JWT in httpOnly cookies.
- Fixed autosave that showed "Saved" on failed requests: it now waits for the server and uses version checks (HTTP 409) so two tabs cannot overwrite each other.

RecoverFlow - Policy-first payment recovery (built to the Razorpay AI Buildathon brief)

Node.js | Razorpay webhooks (Test Mode) | Policy engine | Role-based access

- Built a payment-recovery tool that diagnoses failed payments and recommends one bounded action; anything risky waits for human approval, and nothing runs automatically.
- Added a policy layer (retry limits, consent, duplicate-charge flags), an audit trail, viewer/approver/admin roles and a signature-protected Razorpay webhook.
- Tested on 47 hand-written synthetic cases: fixed a rule that matched "fund" inside "Refund", raising accuracy from 72.3% to 97.9% with 0 unsafe actions.

EXPERIENCE

IoT & Robotics Trainee - T-Works — Aug - Sep 2024

- Worked on AI-powered smart street lights: hardware integration, sensor calibration and IoT connectivity.

Student Intern - Airbac Labs — Apr - Jul 2024

- Learned Python and machine learning and applied them to practical projects, including stock-market prediction models.

Community Volunteer - Rubaroo — Aug 2024

- Led a STEM-career awareness project that engaged 100+ students.

EDUCATION

B.Tech, Computer Science (AI/ML) - NxtWave Institute of Advanced Technologies (NIAT), Hyderabad — 2025 - 2029

SGPA: 9.52 (Semester 3)

Intermediate (Class XII) - Texas International — 2023 - 2025

Percentage: 90.5%
